

FITMOVEMENT

Context:

FitMovement app is a cloud-based application, and its main purpose is to create a place where gym members can share their working out progress.

Besides, the app also helps users to schedule their working out programs.

Technologies developed:

Push notification

Map & GPS services

Camera & Media access

Objective:

With our application, user will get the notification about the working out schedule before 30 minutes.

By creating a feature where user can upload photos on their profile page, it helps user get motivated to keep on track of their working out. User can also get connected to other gym members.
